Introduction

Why PhotoCleaner?

An average digital camera user could take dozens of pictures at a time. That is what digital cameras are all about, right? But then it becomes obvious that these photos need some tweaking – many pictures are lifeless, have flat colors, people on the pictures have red eyes, and the details are not sharp enough. Also, the pictures are usually too big to be sent in an e-mail or place on a web site.

To correct this, one has to go through several typical steps, such as enhance colors, crop, fix "red eyes", adjust brightness, sharpen, resize, and so on... Doing this manually step-by-step requires image processing skills and expensive hard-to-use image editing software. But more important, it is a long and tedious process, which is why most digital photographers just prefer to ignore the problem.

PhotoCleaner was created to address this issue and give the photographers professionally-looking results without having them spend much time and money. It is practically a one-click tool - just load the picture and click "Enhance" button. On the other hand, it allows changing the enhancement settings, so that you could adjust the enhancement process for your camera and to your preference. The batch enhancing is another time-saving function of PhotoCleaner – just point it at multiple pictures on your computer's disk and all the pictures will be enhanced automatically. As a part of batch processing, PhotoCleaner can create PhotoAlbums – web pages presenting your photographs.

Where to Get PhotoCleaner?

To purchase PhotoCleaner online, please visit the website at <u>www.PhotoCleaner.com</u> and click on the <u>buyonline</u> link at the top of the web page. Before you buy, you could download a FREE trial version which is identical to the full version but you could use it only for 30 days. This allows you to make sure that PhotoCleaner is a good solution for your needs before you make a commitment. To download free trial version, please go to the website at <u>www.PhotoCleaner.com</u>, click on the <u>reation for the trial download</u> link at the top of the web page, and select the version you want to download.

Basic Version vs. Professional Version

PhotoCleaner is available in two versions: Basic and Professional.

Basic version is good for the users who appreciate the simplicity of the operation and who do not need to process dozens of pictures at once. Basic version is very easy to use – you load a picture, click Enhance button and save the result. However, even in the Basic version, you have the full control over the enhancement process – you could change the enhancement settings or turn off separate enhancement steps. Rotate, Crop, Red–Eye functions are available in the Basic version.

Professional version is a real time-saver - it allows you to enhance multiple pictures in one run. You select the pictures from different folders, you specify where you want the results to be saved, whether you need PhotoAlbum created, and you click "Enhance Pictures". All pictures will be enhanced automatically. Professional version includes all functions of the Basic version.

Professional

Getting Help

If you have any questions about PhotoCleaner, there are several things you could do. We would suggest checking "How do I?" and "Frequently Asked Questions" sections of this document – most probably you would find the answer there.

PhotoCleaner program includes an extensive help system. To reach it, press F1 key, select "Help-Contents", or click the question mark button on the toolbar.

You are welcome to visit the "Help and Support" page on <u>www.PhotoCleaner.com</u> website – this page has a form to send a message to PhotoCleaner technical support. You could also send an e-mail to <u>support@photocleaner.com</u>.

Quick Start

Install PhotoCleaner

Both trial and the full version of PhotoCleaner are provided as a single executable installation package. Trial versions have exactly the same functions as the corresponding full versions, but you cannot use them longer than 30 days after the installation.

To install PhotoCleaner you have to run the installation program and go through several screens clicking the Next button.

As the first step of the installation you need to select the language. The installation process will continue in the language you have selected and PhotoCleaner will use this language for menus and messages. You will be able to change the language at the "Preferences" window (Edit→Preferences).

If you are running Windows 2000, Windows XP, or Windows Vista, you must have Administrator's privileges on your computer.

Please consult the separate Installation Manual for more details on PhotoCleaner installation. The Installation Manual is available for free download at the download area of the website <u>www.PhotoCleaner.com</u>.

PhotoCleaner Overview

The following picture shows the appearance of PhotoCleaner Professional (the Basic version looks exactly the same with the exception of the third "Batch Processing" tab):

PhotoCleaner Pro - C:\My Pictures	kauai2.jpg	
<u>Eile E</u> dit <u>V</u> iew <u>H</u> elp		
🗁 सि 😓 🖣 🕝 🛛 🕂 🚳 🔍		
Resize & Rotate Use width 800 Use height 600 Juse height 600 Auto-Rotate Adjust Level adjustment Use color correction Color saturation Reveal shadows Noise reduction Apply vignette Sharpen Add Caption Hawaii Location Top-left Place caption on frame Frame Add frame Width 20 Inner border Color Width 20 Inner border Color Width 3	Original Result Batch Processing	Independent zoom
	Original: 544x798 pixels Resu	It: 457x648 pixels 68%

At the top of the window there is a menu; below it there is a toolbar which contains shortcut buttons to most commonly used functions. The very bottom of the window is occupied by the status bar which displays the helpful hints and various program and image information.

The panel at the left is occupied by the enhancement settings panel. You could turn each of the steps on and off by checking the corresponding box and you could change the parameters by using sliders or entering values

into the corresponding boxes. The button at the bottom of the left panel is the main "Enhance Picture" button which launches the enhancement process.

The main area is occupied by the Original and Result tabs. The tabs display the picture before and after enhancement. You could switch between the tabs and view the difference between "before" and "after".

The professional version also includes the "Batch Processing" tab which includes everything you need to do the batch processing of multiple pictures.

Single Picture Enhancement

The simplest way to use PhotoCleaner is:

- Load an image either by dragging it with your mouse from Windows Explorer or by running an Open pop-up window ("File→Open Picture" or the "open" button on the toolbar). The picture will appear on the "Original" tab.
- 2. Click "Enhance Picture" button. PhotoCleaner will show the progress status window and go through the image enhancement process.
- 3. That is it! The "Result" tab now contains the enhanced image. Switch several times between "Original" and "Result" tabs to see the difference. You can save the result on the disk or copy it to clipboard to be inserted into another document.

Maybe you would want to change the default enhancement settings on the left-hand panel. If you have changed the enhancement settings, PhotoCleaner will repeat the enhancement process when you switch to Result tab. PhotoCleaner will remember the enhancement settings next time you will start the program.

To appreciate the quality of the result image, please zoom the result image to actual size (100% zoom). By default, all zoom commands (zoom in $\textcircled{\label{eq:som}}$, zoom out $\textcircled{\label{eq:som}}$, zoom to actual size $\textcircled{\label{eq:som}}$, and zoom to fit the window $\textcircled{\label{eq:som}}$) are

applied to both original and result images at the same time. You could check the "Independent Zoom" box to zoom only the currently displayed image.

When you have the Original tab displayed you could do several manual operations: rotate, crop, and remove red-eye. These operations are done with the original, so that you would not need to repeat them each time the result is re-created.

The save, print, and copy to clipboard functions are available when the Result tab is active.

Please find more details on the image enhancement in the "How Do I?" section below.

Batch Enhancement

Generally speaking, the batch enhancement consists of three steps:

- Select the pictures to enhance. The pictures could be selected from different folders. To add a picture to the list, select it in the list in the top-left corner of the Batch Processing tab and either drag it to the "Selected Pictures" list or click the "Add" button. You can remove a picture from the list by selecting it and clicking the "Remove" button.
- Select if you want PhotoAlbum to be created. If you check the "Create PhotoAlbum" box, you will be able to enter the album title, style, and sort order. Check "Include Picture Information" if you want the album web page to include EXIF information recorded by your camera. When PhotoAlbum option is selected, the Destination options are limited.
- Select the destination options. You could either have the enhanced pictures saved in their original folders, or all of them could be collected into a single specified folder. If a picture with the same name already exists in the destination folder, PhotoCleaner will either overwrite the image if the corresponding box is checked, or will rename the picture automatically using prefix or suffix. Prefix and suffix could be changed in the Preferences window (Edit→Preferences).

Below is the screenshot of the batch processing tab of PhotoCleaner Professional.

How Do I?

Load Picture

┌─ || 😓 🖻 🞯 🗣 🗞 🔍 🔍 💐 İ ?

You can load the picture either by dragging it from the Windows Explorer with the mouse, by using "File \rightarrow Open" menu command, or by clicking the "Open file" toolbar button. If you have used menu or button, the "Open Image" dialog will appear.

Open					? 🛛
Look in: My Recent Documents Desktop My Documents	My Pictures		G 🕸 🔛 🖽 -	e	Fit
My Computer My Network JPEG Bitmap (JPG File: 135 Kb Mem		3.5megapixels.jpg All graphics ✓ Preview	v	Open Cancel	

If there is an unsaved work, PhotoCleaner will remind you to save the enhanced image.

TIFF format note: Most digital cameras produce so called Uncompressed TIFF. PhotoCleaner could load only this version of TIFF. You could encounter images with the TIFF extension that are compressed using one of the following methods: LZW, JPG, or ZIP. PhotoCleaner cannot load these files.

Rotate Picture

You could rotate the original image 90 degrees clockwise and 90 degrees counter-clockwise using the blue arrow buttons on the toolbar. These arrows are enabled only if the Original image is displayed (not the Result one).

Also, many modern cameras have the orientation sensor which "feels" when the camera is rotated to take a vertical shot. This orientation information is recorded inside the digital image and PhotoCleaner can use this information for "Auto-Rotation". If your camera has the orientation sensor and you leave the Auto-Rotate box checked, PhotoCleaner will automatically rotate the images into the correct position, even if the shot was taken with the camera upside down.

Fix Red Eye

🗁 🗟 🗟 🙆 🔁 🏀 🔍 🄍 🔍 🔍 🚺 ?

PhotoCleaner can correct the red-eye effect that appears when the portraits are shot with the on-camera flash.

To fix the red eyes, click the "red eye" button on the toolbar or select "Edit-Remove Red Eye" menu command. The mouse pointer will change into cross-hair and you could select one or more rectangular areas (to select the second area, press and hold the SHIFT key while dragging the mouse). We suggest selecting each eye separately and as tight as possible. When you have selected the eye areas(s), either double-click the inside of the selection or click the "red eye" toolbar button again.

Crop Picture

☺ถ๏๏**๖**७९९९९ і ?

Many pictures would benefit from a tighter crop – by removing the unnecessary dead space or distracting elements it is possible to get better composition.

To crop your image, click the "crop" button on the toolbar or select "Edit-Crop" menu command. The mouse pointer will change into a crosshair and you could select a rectangular area. Clicking outside the area clears the selection. When you are done, either click the same button again or double-click inside the selected area.

Crop is also useful when you prepare pictures to be printed. The width to height ratio of a typical digital camera is different from the same ratio of standard print paper sizes (like 4" x 6" or 10cm x 15cm). A typical lab would crop the top and the bottom of your image to fit it on 4" by 6" print. It works in some cases but sometimes the heads or feet of your friends are lost. It would help to do the crop yourself making intelligent choice about what part to cut off. When you are dragging the crop selection box, you would notice that at certain positions the selection changes color. It happens when the width to height ratio corresponds to standard 4" x 6" (10cm x 15cm) print.

Save and Restore Enhancement Settings

You may notice that you often use several sets of enhancement settings. For example, it could be different sets for indoor and outdoor pictures, or the pictures that are supposed to be printed and the pictures for viewing on the screen.

To facilitate this, PhotoCleaner is able to save and restore the enhancement settings. When you selected the settings on the left-hand panel that you want to save for the future, select "File \rightarrow Save Settings" and select the folder and the name of the file you want to save. In the same way, when you need to recall the settings, select "File \rightarrow Load Settings" and select the settings file.

Setting files have .INI file extension. In the home directory of PhotoCleaner there is a file default.ini which contains the settings used by PhotoCleaner as initial values. Keep in mind that this file is overwritten each time you exit PhotoCleaner.

Add Frame and Caption

PhotoCleaner allows you to add framing to your pictures. Framing includes three layers:

- Inner border: the border that goes immediately next to the picture
- Frame itself: middle layer which is usually wider than the borders
- Outer border: the outermost border.

You could set the width and the color of each of these three layers.

Caption is one line of text that will be added either to the image or to the frame. You could select one of the six positions for the caption: top-left, top, top-right, bottom-left, bottom, and bottom-right.

You can use special characters in the Caption textbox – PhotoCleaner will substitute them with actual values. In the current version, {F} or {f} is substituted with the file name (without the extension), {C} or {c} is substituted with the copyright symbol, and {D} or {d} is substituted with the picture date and time.

View Photo Information

✑ ⊣ 📚 🖻 🥝 🗢 ≒ 🗞 🤍 ≪ 🍾 ?

Most of the modern digital cameras record some photographic information into each digital picture. This information is known as EXIF data. Various cameras record slightly different information, but usually it includes the date and time when the picture was shot, shutter speed, aperture, zoom value, camera model, etc. PhotoCleaner is able to read this data. To see photo information, select "View→Photo Information" or select the "i" button on the toolbar. The following window will appear:

"Copy to Clipboard" button copies the text to the clipboard.

If the button is disabled, the loaded image does not contain EXIF data.

Save Enhanced Picture

If the Result tab is active, you could save the enhanced picture as an image file in JPEG, TIFF, BMP, or PNG format. Select "File \rightarrow Save" or click the "blue diskette" icon on the toolbar. The "Save" pop-up window will appear:

Save As					? 🛛
Save in:	My Pictures	¥	G 🕫 📂 🖽-		Fit 💌 💁 🗵
My Recent Documents Desktop My Documents My Computer	2426615-md1 2426615-md. dina01.jpg mike_f.jpg mountainside	curved.jpg			700 x 525 pixel 16777216 Colors (24 bit) 72 x 72 dpi
	File <u>n</u> ame:	party	~	<u>Save</u>	
My Network	Save as type:	JPEG Bitmap (JPG)	~	Cancel	
JPEG Bitmap (JPG) File: 59 Kb Mem: 1		✓ Preview		Advanced	

You could select various parameters of the file to be saved on the disk, for example, JPEG file quality. To do this, click the "Advanced" button:

Higher quality values produce better looking but larger files. Typical values are between 60 and 85.

This window will be different for different file formats.

Copy to Clipboard

You could copy the enhanced image to clipboard for inserting it to another document. To do this, select "Edit \rightarrow Copy Picture", press Ctrl+C or click the copy button on the toolbar.

Print Enhanced Picture

🗁 🖶 😓 🛍 🎯 😳 🕁 🗇 🔍 🍳 🍳 🔍 🐛 İ 📍

You could print the enhanced image on any printer installed in your Windows. To do this, select "File \rightarrow Print Result". The Print Preview window will be displayed where you could change the margins, position and other printing related settings.

Print		
Margins (inches)	Position Preview	
Size Fit to page Width 6 inches Height 4 inches	Gamma correction Value 1 C Measure Units Units inches	
OK Cancel	Print Setup	

Create PhotoAlbum

As a part of batch image enhancement, PhotoCleaner could create a PhotoAlbum - it is a web page (or set of web pages) that nicely present your photographs. PhotoCleaner supports several styles of PhotoAlbums - tablelike styles, filmstrip-like styles, and slideshows.

To create PhotoAlbum, check the box "Create PhotoAlbum" on the "Batch Processing" panel. Enter the Title of the album, the style of the album, and the order to sort the pictures (either by the name or by the date).

Please note that when you check the box "Create PhotoAlbum", your options in the "Destination" section are limited – you can only save the images as JPEG and you could only place the enhanced images to a specified folder.

Photo Album	hoto Album		Preview style
Title	My Vacation		
Style	Film-Black-Bottom	~	
Sort	by name	~	
	ude picture information	Open album when done	
Destination Original	folders	Picture form	
Selected	folder	() Uncha	anged
C: Wy F	ictures\	O JPEG	Quality 🗍 🗍 85
Overwri	te files	O TIFF	

If "Include Picture Information" box is checked, the EXIF data will be shown on the web page.

PhotoAlbums consist of several files, including the images themselves, the thumbnail images, the main web page (index.html) and the service files. To view a PhotoAlbum, double-click the index.html file. If you want to copy the PhotoAlbum to a web site or a CD disk, include the entire directory.

Frequently Asked Questions

General

Question	Answer
What image formats does PhotoCleaner support?	PhotoCleaner can work with images in JPEG, TIFF, PNG, or BMP formats. You may be able to use PhotoCleaner with other formats, but these "extra" formats have not been well-tested and are not officially supported.
I have a picture in TIFF format and PhotoCleaner cannot open it. Why does it happen?	There are several types of TIFF pictures – they differ by the type of compression they use. Uncompressed TIFF is the most popular and universal format as of today – at least all consumer digital cameras use it for saving TIFF images. Other types, like ZIP– or LZW–compressed could be created by some image–editing software programs.

	Photo Clooper, supports arely
	PhotoCleaner supports only uncompressed flavor of TIFF.
When I am dragging the selection to crop the image, the selection box sometimes changes color. What does it mean?	Since many PhotoCleaner users are preparing their images for printing on standard 4in x 6in (10cm x 15cm) paper, this trick helps to select the correct image proportions for this print size. The yellow/red selection box corresponds to 4x6 ratio.
I am using red-eye removal function and sometimes I am getting strange dark areas around the eyes. What shall I do to avoid it?	It could happen if you are selecting an area that is too large. To get the best results try to select the smallest possible area around the red eye. Also, it is much better to select two eyes separately than to select a single area which includes both eyes. To select two (and more) areas separately, press and hold SHIFT key when selecting multiple areas.
I would love to see PhotoCleaner released in my native language – my fellow countrymen should experience the convenience of PhotoCleaner. What can I do?	We will eventually release PhotoCleaner in several major languages. If you are willing to help by translating a couple of text pages into your native language – please write to <u>localization@photocleaner.com</u> . Volunteer translators will be rewarded by a lifetime PhotoCleaner license and a place in our "hall of fame".
In what languages do you provide customer support?	At this time English is the only language we understand. Sorry.
My great sunset photos lost their colors after being enhanced with PhotoCleaner. What shall I do?	If a photo was shot under unusual lighting conditions (for instance, sunset or sunrise pictures) PhotoCleaner might make a mistake when doing an automatic

	color correction. If you don't like the color correction results you can always turn the color correction off (uncheck "Use color correction" box) for the image in question.
What algorithm PhotoCleaner uses for resampling pictures?	PhotoCleaner uses Lanczos resampling which seems to produce the best results.
I want to see what other people were able to achieve by using	Please visit the Galleries section of our website. You are welcome to send us the
PhotoCleaner.	link to your gallery on the web, we will be glad to include it on our website.

Installation

Question	Answer
I purchased PhotoCleaner online and I have not received the e-mail with the download link!	Please check if you are using any mail- filtering system. Some such systems automatically stop all e-mail and send a response to the sender with the request to enter some code. Since these messages are sent with an automatic system, this scheme does not work. Please make sure that your system lets the e-mail messages from photocleaner.com and digitaldozen.com through.
As a registered user, I have requested my copy of PhotoCleaner at the Registered Users area of the website, but I have not received the e-mail with the download link.	The same problem Please check if you are using any mail-filtering system. Some of these systems automatically stop all e- mail messages and send an automatic response to the sender with the request to enter some code. Since the download messages are sent by an automatic system, this scheme does not work. Please make sure that your system lets the e-mail messages from photocleaner.com and

	digitaldozen.com through.
I requested the download link from the website, but when I click it, I am getting an error message "Corrupted Link".	The link in your email could have some special characters (e.g. "*") at the end, which your email reader program might not recognize as part of the link (in other words, these characters will not be underlined). Please copy the entire link including these trailing characters and paste it into your web browser.
What if my system crashes and I'll need to reinstall PhotoCleaner?	Most people get PhotoCleaner as an internet download. We strongly recommend saving the installation package (the file named PhotoCleanerBasic_Install.exe or PhotoCleanerPro_Install.exe) on a different computer or burn it on a CD. Also, since one year of free updates is included, you will be able to use the Registered Users section on our website to request your copy during 12 months after purchasing PhotoCleaner license.
Do I need any special computer permissions to install PhotoCleaner?	To install or uninstall PhotoCleaner, you need to have Administrator's privileges.
I have a Mac computer – can I use PhotoCleaner?	PhotoCleaner can be used only on Windows 98, Windows ME, Windows 2000, Windows XP, Windows 2003, and Windows Vista. You might be able to use PhotoCleaner on Windows 95 and Windows NT but it is neither recommended nor officially supported. Other systems are not compatible with PhotoCleaner.
I have changed my internet provider and now I have a different	Please contact customer support at support@photocleaner.com to update your

my copy of PhotoCleaner at the **Registered Users area?**

e-mail address. How I can request e-mail address in the database. Please include some piece of information that would help to identify you like the order date or number, address, etc.

Tips and Tricks

- Results are always better when you downsize the photos start with a bigger image!
- If you are preparing your picture for printing make it look oversharpened on the screen - then it will look great on paper. Also for most printing services, it makes sense to bump the colors up - printed pictures usually have subdued colors comparing to the pictures on the computer screen.
- Photo Cleaner can be used both with and without being connected to the internet. If you are connected to the internet, Photo Cleaner checks for new versions and critical updates. Absolutely no private information is sent to the server. You can control this behavior through the "Check for New Versions" item in the Help menu.
- If a photo was shot under unusual lighting conditions (for instance, sunset or sunrise pictures) Photo Cleaner might make a mistake when doing an automatic color correction. If you don't like the color correction results you can always turn the color correction off for the image in question.
- PhotoCleaner supports multiple sets of enhancement settings. You can save and load the settings (see File menu). It allows having separate settings, for instance, for pictures that are prepared for printing and to be placed on a website.
- You can use special characters in the Caption textbox PhotoCleaner will substitute them. In the current version, {F} or {f} is substituted with the file name (without the extension), $\{C\}$ or $\{c\}$ is substituted with the copyright symbol, and {D} or {d} is substituted with the picture date and time.
- If you are creating PhotoAlbum, it is better to save it in an empty. folder. Then, if you would want to place PhotoAlbum on a website or a

CD – just copy the entire folder. This will ensure that you have copied all necessary files.

- Use table-style PhotoAlbums on website for quick access through slow internet connections and filmstrip-style PhotoAlbums for viewing from a CD or a computer disk: filmstrip PhotoAlbums take longer time to load initially.
- Please keep in mind that each time you save a picture in JPEG format, its quality degrades slightly. It could become a problem if a picture goes through several cycles of editing, each time being saved as JPEG. If you plan to save a picture more than a couple of times, use a lossless image format like TIFF.

End User License

This program is neither freeware nor public domain.

PhotoCleaner comes in two versions: free 30-day Trial Version and fully functional version. You can find out what version do you have by checking the About window at Help \rightarrow About menu.

Please read the license agreement below. If you disagree with this agreement, please delete all PhotoCleaner program files from your computer.

Free 30-day Trial Version

You may freely distribute 30-day Trial Version to any number of people. Any user who installs and runs the trial version is automatically subject to this license agreement.

You may not charge money for the Trial Version in excess of the distribution media and handling costs. You may not misrepresent the program origin, claim the authorship, alter the program files, and distribute the program without license file or help file. Reverse engineering, decompiling and disassembling the program is strictly prohibited. After using the program for 30 days you may either purchase the fully functional version of PhotoCleaner or stop using the program and uninstall it from your computer's disk. Use of this software after the trial period of 30 days is in violation of international Copyright law!

Fully functional version

When you purchase the fully functional version of PhotoCleaner, one user license is granted to you. You may make copies of the software for backup purposes and to install it on up to five computers, as long as only one person uses the software. This way, you may install it at home and in office for your personal use. Additional licenses are necessary if more than one person is using the program.

Along with the license to use the software you will receive one year of free* updates of PhotoCleaner.

Please visit the PhotoCleaner website at <u>www.photocleaner.com</u> for additional information about acquiring the fully functional version. Flexible multi-license prices are available - contact <u>sales@photocleaner.com</u>.

Liability

Although we tried to make PhotoCleaner as bug-free as possible, no software is completely error-free. Descriptions of the bugs will be gladly accepted, but we cannot guarantee that we will be able to correct them.

PHOTOCLEANER SOFTWARE IS PROVIDED "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY AND/OR SUITABILITY FOR A PARTICULAR PURPOSE.

THE USER ASSUMES THE ENTIRE RISK OF ANY DAMAGE CAUSED BY THIS SOFTWARE.

^{*} Except for the promotional copies that are being distributed free of charge.

IN NO EVENT SHALL THE AUTHOR BE LIABLE FOR DAMAGE OF ANY KIND, LOSS OF DATA, LOSS OF PROFITS, BUSINESS INTERRUPTION OR OTHER LOSS ARISING DIRECTLY OR INDIRECTLY.
